Letter no C 697-2 dated 16th Oct 1937 from the
Dr of Health forwarding ^{an} ~~the~~ estimate for a sum
of Rs 7,700/- prepared by the Sanitary Engineer,
Bureau of Sanitary Engineering for the
Scheme of water supply to Ganjam town.

Subtr

Kind attention is invited to G.O. NO. 47-9
M.B. 33-113 dated 8/6/1936, sanctioning an
estimate for Rs 19,988 for the Scheme of
Water supply to Ganjam town, for and the
Meeting the cost in equal proportions

It is now stated in the report of the
Sanitary Engineer that a separate scheme for
~~Rain water supply~~ ^{supply of water} to ~~the~~ ^{the} cultivation ~~scheme~~
at Ganjam has been sanctioned by Govt,
and that the same source could be
utilised for supplying filtered water to
Ganjam town. In pursuance of this idea,
The Sanitary Engineer has prepared a
Revised estimate (Estimate NO II-Flag J) for
a sum of Rs 27,652/- and the net excess
of cost over and above the original
estimate is stated to be Rs 7,700/-.

The Dr. of Health solicits approval to the
Revised Scheme.

The present pumping plants for the water supply of both Seringapatam and Ganjam are located at intake No.1. The pumping plant for fig cultivation is at intake No.2.

From the examination of the map, it will be seen that between intakes No.1 and No.2, sullage faecal matter and street sweepings all are ^{bound} ~~likely~~ to be washed into the river. ~~Intake No.1~~ Intake No.1 being on the upstream side of all these contaminations, has to be preferred, even if it costs more, for a water supply scheme.

The Pump House situated at intake No.1. is well protected by the Fort wall and it would be a pity to choose site No.2 in preference to site No.1. A break down, due to floods, of a water supply during the rains, has to be prevented.

Additional advantages for No.1 intake are :-

(1) There will be no necessity for employing a separate trained mechanic to supervise the pumping, filtration and chlorination for Ganjam water supply, as the one employed for Seringapatam water supply will look after this work also.

(2) Though the pumps of Ganjam and Seringapatam water supplies are of different heads, the Ganjam pump can be used for Seringapatam water supply in case of a break down.

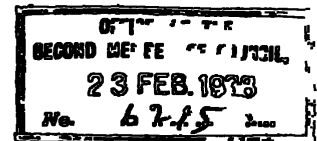

(3) There will be the saving of cost of building protective works which will be required, if the Ganjam water supply pump and filter have to be erected at the intake No.2.

I strongly recommend intake No.1 for water supply for both Ganjam and Seringapatam. Pumping for fig cultivation can be made at intake No.2.

Secretary to Government,
L.S.G. Department.

Chief Engineer, 21/2/38

So, there is no need to sanction the request
estimate needed from Dr. G. S. for pump water

Final Note by the Second Member of Council

Subject.—

Water supply to Ganjam including the Gumbaz.

These papers relate to the revised scheme of water supply to Ganjam and the Gumbaz from a source independent of Seringapatam.

Q A scheme of water supply to Ganjam at a cost of Rs.19,988 was sanctioned in Government Order No L.47-9/Ml.6-33-113 dated 8th June 1936, the expenditure being met by the Government and the Seringapatam Town Municipal Council in equal proportions

K The Director of Public Health has now submitted a revised estimate for Rs.27,652 which provides for the supply of water to the Gumbaz also at a cost of Rs.3,500. As neither the Seringapatam town Municipal Council nor the funds of the Gumbaz are reported at present to be in a position to finance even a portion of the scheme it is proposed to sanction the revised estimate and to meet the excess of Rs.7,700 over the sanctioned estimate in the manner noted below:-

- 117
ans
- | | |
|---------------|---|
| (1) Rs 5,600. | To be given as an outright grant from the provision made for the "Improvement of Water Supply in Towns" in the State budget for 1938-39 |
| (2) Rs.2,100 | To be advanced as a loan to the Seringapatam Town Municipal Council for meeting its quota. |

10-2- The Dewan and the First Member of Council are agreeable to the proposal. The papers are submitted for His Highness' gracious approval.

SERINGAPATAM AND GANJAM.

As sanctioned and worked out.

Revised proposals.

Combined scheme.

1. Seringapatam : Main through the filter to the tank with a head of 120 ft.

To comply with the municipal request and also to provide water to Gumbaz, taking advantage of

i. 5,760 ft. of 3" C.I. cast iron pipe which is already laid and is worth Rs.5,760/-

ii. Fig cultivation scheme for which a separate pumping plant and pump house are already existing.

2. Ganjam.
Different pump. Pumping through the same filter and the same tank to Ganjam for a distance of 1500 ft. against a head of 250 ft.
Result. (1) No continuous supply is possible to either place.
(2) Alternative pumping against different heads through the same filter and part of the same main. May result in inefficiency of the filter as the filter fitted up is meant for 125' head.

3. To give separate and continuous supply as demanded by Seringapatam Municipality at present the following arrangements have to be made.

1. To provide a separate filter at a cost of Rs.6,500/-
2. Laying a separate main to a length of 1500 ft. Estimated cost Rs.2,000 in duplicating the line.

Financial advantage.

Amount as per sanctioned :	Rs
Cont: Est. & P Charges.	17,428
Cost of labour for renewing 8360 3" C.I. main and relaying	1,500
Cost of filters.	6,500

5 miles

To be worked in two stages

1st stage
duplicating the five mile main
71,000

2nd stage
providing filter
pump and additional
distribution

50,000

Advantages

Said to be clear

Disadvantages

1. One main is already incrustated and reduced in size and likely to get worse.

2. It is likely the second one will also get incrustated

3. There will be a necessity to have another main or cleaning the main in course of time

4. Enormous cost for the 5 mile length of duplicate main

Yagachn River

one mile

Stages Only one stage provided. A suction well on the bank of the river 25 ft deep. Trial well shows plenty of clear water handy bed from about 7 ft from the bed level

Disadvantage. There is no discharge. The local street engineer Mr. Vincelair in the municipal meeting that after 6 years of observation, he is of opinion that the flow of water flowing in the river during summer, while maximum requirements will be 1/3 sec

Advantages.

1. Cost of single main for 1 mile length cheaper

2. No chance of choking the pipeline as the water will be filtered before pumping and the water that will be used is from an infiltration gallery

3. The water will be pumped from the site of source and it can be pumped to 50% more in quantity.

4. As there is no second stage, protected water at source and sufficient can be immediately given at about 1/3 the cost, if the yield from the well is sufficient

To

The Secretary to Government,
Local Self Government Department, Bangalore.

SIR,

I have the honour to forward herewith a copy of letter No. 398 dated 1st September 1937 and copies of its enclosures received from the Sanitary Engineer, regarding the feasibility of a separate scheme of filtered water supply to Ganjam at an estimated cost of Rs. 7,700 and to request you to be so good as to obtain and convey approval of Government for the proposed scheme of water supply.

I have the honour to be,
Sir,
Your most obedient servant,
P. Panthasarathy
Director of Health.

Letter No. 398 dated 1st September 1937 from the Sanitary Engineer, Bureau of Sanitary Engineering, Bangalore, to the Director of Health in Mysore, Bangalore

Re Drinking Water Supply to Ganjam

In submitting herewith a copy of letter No. 288/36-37 dated 20/27th August 1937 from the President, Municipal Council, Seringapatam, to this office, I have the honour to state that an estimate for Rs 25,000/- was submitted to the Government for water supply to Ganjam, for an independent scheme, drawing supply from the same source as that of Seringapatam water supply. But while according sanction to this estimate, the amount was brought down to Rs. 19,988 by eliminating the provision made for 'Pressure filter and its erection etc' with an idea of making use of the existing filter plant for both Seringapatam and Ganjam water supply alternately.

But owing to increased demand for water the present duration of pumping every day for Seringapatam supply alone is 14 to 16 hours. Besides this, if the original proposal is adopted, the filter plant now installed at Seringapatam, being a single unit, would be daily subjected to sudden variations of pressure, as the same plant will be made to function for supplying filtered water both to Seringapatam and Ganjam. In the case of Seringapatam supply the pumping head is 125' while that of Ganjam is 250 ft.

This fact and the idea of providing an independent main (extra 1,500 Rft in length) direct from the Pump House at Seringapatam, in order to make the Ganjam supply scheme entirely independent was clearly explained to the Municipal Council already. In accordance with the resolution of the meeting convened on this account, an estimate (Vide estimate No 1 enclosed herewith) is prepared in this connection to obviate the aforesaid anxiety and ensure guaranteed supply for both the places.

While the details of this modified scheme were being prepared, there was a suggestion to arrange to supply protected water to Gumbuz area also, as good many pilgrims congregate there very often and the estimate for which amounts to Rs. 3,500/-.

In the meanwhile a separate scheme for raw water supply to the fig cultivation at Ganjam was sanctioned by the Government for pumping water from an altogether different source in the immediate proximity of Ganjam town itself.

This suggested the possibility of a project for filtered water supply to Ganjam from the same source as that of fig cultivation. The estimate (Vide estimate No. 2) prepared in this respect is also herewith enclosed.

In this modified scheme the arrangement proposed is (1) to remove the long length of 3" rising main of 9360 ft. already laid from the 4" rising main of Seringapatam to the overhead tank at Ganjam and lay a fresh a length of 3600 ft. only from the same source where from the fig cultivation supply is started and secondly to build a pump house for installing a pumping plant and the filter unit for pumping filtered water to the existing elevated tank.

The net excess over the sanctioned estimate on this account is only Rs. 7,700/- as against an excess of Rs. 12,700/- in the estimate No. 1. In addition to this, considerable reduction in power charges can be secured, as the length of the rising main in this arrangement from the source to the overhead pure water tank is only 3600 Rft. as against 9360 in the former case, so that the cost of 5760 ft. of pipe removed would be also saved. This Department would be quite willing to take back the said surplus pipes giving due credit to this work at the present rate, which is much higher than the actual payment made, as the price of iron materials has since gone up very high. This extra amount realised would cover the charges for the removal of the length of the main already laid. No additional staff other than what has been proposed already is needed, As only an Assistant Operator and a Helper in addition to the present staff

staff employed for water supply to the fig cultivation, will be entertained and their salary alone will be debited to this work. If this proposal is accepted, the President, Municipal Council, Seringapatam, will be given a suitable reply accordingly. An early reply in the matter is requested.

O. O. Mahalingam

Director of Health

Letter No.O.C.288/36-37 dated 20/27th August 1937 from the President, Municipal Council, Seringapatam, to the Sanitary Engineer Bureau of Sanitary Engineering, Bangalore.

With reference to your letter No.S.E.160 dated 7/9th July 1937, regarding fixing up hours of water supply to Ganjam I have the honour to state that the Council resolved in their meeting dated 27th July 1937 that the Government may be requested to provide for an extra filter and an extra main of 1500 ft. in length to give⁴ independent supply to Ganjam so as to ensure all the 24 hours supply to both the places. They have resolved also that Government may be requested to kindly give a grant of Rs. 10,000/- to provide for the extra filter and pipeline. A reference has been submitted to the Deputy Commissioner in this office No.O.C.288 dated 30th July 1937 requesting him to recommend to Government to kindly set apart an amount of Rs. 10,000/- out of the grant for providing drinking water in the State during this year. I request you to kindly prepare an estimate for the work and send it early so that further action may be taken by the Council in the matter.

GANJAM WATER SUPPLY

Estimate No. 1

For pumping filtered water from the same source as
that of Seringapatam water supply-

1. Amount sanctioned in the estimate excluding establishment, tools and plant.	Rs. 17,428
2. One 72" diameter Filter with erection etc.	Rs. 500
3. Laying 1500 Running Ft. of 3" C.I. pipe line from Pump House to starting point of the main already laid.	2,000

Total Rs.	25,928
Establishment, tools and plant charges at 12½%	3,241
Provision made for Gumbaz water supply	3,500

Total Rs.	32,669
Deduct the amount sanctioned including Tools and plant charges.	19,988 °

Balance. Rs	12,681 OR 12,700

Ganjam Water supply Scheme

It was reported that this scheme as sanctioned has been fully carried out except for the erection of the pump which had arrived only recently and that it will be shortly erected.

This scheme provides for a common filter and a common rising main for a length of about 1500 feet for both the places and. Consequently, the two pumps for Seringapatam and Ganjam have to be worked alternately and this would naturally affect the hours of supply to both the places. The Municipality considered this point at one of their meetings and passed a resolution to the effect that as these common factors in the two schemes would affect the supply to both the places, the schemes may be made completely independent of each other, and Govt. may be pleased to make a grant of the expenditure required for the purpose. The question of cost was taken up and two estimates

were prepared including the cost of extending the supply to the Gun bog in Gyanjam, which had been previously omitted. The estimate amounted to Rs 12,000/- and odd. Since, in the meantime, a pumping House for rice cultivation has to be constructed on the river bank at Gyanjam itself, it was considered whether it would not be correct and profitable to transfer the drinking water supply also to the same place. The provision of a separate pump had been sanctioned and it only remained to get one more fitter and remove the rising main already laid, re lay it from the Rice cultivation Pump House, to the storage tank already constructed and thus save a good length of rising main all the way from Seringapatam. The estimate for every item of work, including removing the main already laid, relaying the required length at Gyanjam, giving credit to the value of the length saved, extending the supply to Gun bog, erection &c complete amounted to Rs 7,000/- and odd, thus, shewing a savings of Rs 5,000/-.

Mr. Grandachar was requested to state his objections

He stated that the present position was ideal, in as much as, it gave a protection to the installation from floods being situated within the Fort, while in the other case, the Station has to be erected on the river bank and there is the attendant risk of floods rising up to it

The Chief Engineer stated that it is not a very important item to be seriously considered, as such protection will not be available everywhere else and still the Pump Houses have to be erected on the river bank.

He urged that the water in the river gets polluted by receiving the drainage of Seringapatam and by thousands of persons bathing in it on occasions

Mr. Krishnasingar stated that from his intimate knowledge of Seringapatam for several years past, very few people nowadays go to the river to bathe even on occasions and for that matter the whole Cannery is polluted

including the town water supply to Mysore.

The Chief Engineer stated that this being a live river and the water supply will be filtered and treated with Chlorine, the question of pollution does not arise.

Mr. Gaudachar stated that the original scheme was favourable for giving connections in the event of the two places having extensions and meeting at the common point near about the area where the Electric Colony is located.

Mr. Krishniahgar stated, that the towns extending is problematic and even in the remote contingency of their extending, connections cannot be given from the rising main, but only from the storage reservoirs from both places.

The last point put forward by Mr. Gaudachar is that the common Pump House would enable the two pumps and filters to act as Stand Byes, one to the other, and it is a very great advantage.

Mr. Krishnaveger stated that this point of Stand Byge has not been taken up seriously in any other Scheme.

The Chief Engineer stated, that there is everything in it and where we have a chance of such a Stand Byge, we must not lightly brush aside this consideration.

(Note) The two pumps are of different capacities ^{are} and intended for different heads of pumping. The one for Seringapatam has a pumping capacity of 3500 gallons per hour for a head of 100 feet. That for Gaurjan has a pumping capacity of 3000 gallons per hour for a head of 250 feet. Evidently, one cannot be considered as a Stand Byge to the other. I regret this point was missed and is now brought to notice.

Checkmate Supply

There is nothing in this Scheme. Since the bore-well failed, the revised Scheme of having a well

BUREAU OF SANITARY ENGINEERING
N KRISHNENGAR, Esq., B.E.,
Sanitary Engineer

No. 3217
Encl. 3

Bengaluru (S India), dated. 15th Feb. 1938

Dear Mr. Lakshmanachar:

Referring to our conversation on the water supply of Ganjam, I enclose herewith copies of letters received from Mr. K. H. H. Rao, Superintendent, Vani Vilas Water Works, regarding the insufficiency of water supply to Seringapatam and Ganjam, as desired by you this morning.

Further, referring to the three other points concerning the advisability of separating the Ganjam and Seringapatam water supply, I beg to state that (1) in regard to the question of protection of pump house against high floods, the location of the pumping set on the bank of the river at Ganjam will be such that it will be above the high flood level ^{with} ~~being~~ at the same time the suction head not more than 22 ft. Secondly the capacity of the elevated tank at Ganjam is 7,000 gallons and the length of pipe line between the point behind the Ranganathaswamy temple where the 3rd raising main of Ganjam water supply branches off ^{and the elevated tank} from the 4th raising main of Seringapatam water supply, is about 9,000 ft. and odd. The total head against ~~the~~ which water is being pumped to the elevated tank in Ganjam at present is about 240 ft. of which the frictional head alone works out to 140 ft. By shifting the pump to Ganjam, the total head will be considerably less and consequently the power charges also will be less. Thirdly : Regarding the question of standby, it is possible that the Ganjam water supply pumping set may be used to serve as a standby for the Seringapatam unit when there is a breakdown of Seringapatam unit, because the total head of Seringapatam water supply is only about 130 ft. But vice versa,

the Seringapatam unit cannot be made to serve as a standbye
to the Ganjam ~~unit~~ unit because the total head in the case of
Ganjam water supply as at present located is 240 ft. I
have mentioned all the points we had discussed about, so
that you may take necessary action in the matter.

Yours sincerely,

M. Lakshmanan

B. D.
16/38

Letter No.1082 dated 9th February, 1938, from the Superintendent, Vani Vilas Water Works, Mysore, to the Sanitary Engineer, Bureau of Sanitary Engineering, Bangalore.

With reference to your Memo No.808 dated 5-2-1938 forwarding for report the petition of the residents of Ganjam about increasing the hours of supply of drinking water, I have the honour to state that in his letter No.102 dated 29-7-1938, the Assistant Engineer in charge of this work suggested that the elevated reservoir at Ganjam may be filled once in the morning and once in the afternoon every day so that there may be about six hour's supply to Ganjam every day; and in this office No.198 dated 7-8-1937 a programme of allocation of pumping for Seringapatam and Ganjam was furnished according to which the reservoir is being filled twice a day. The pump for Seringapatam works during night to fill up the reservoir which becomes practically empty in the evening.

Owing to summer, the consumption is high and the total number of hours during which the pumps work has come to 22 per day as per the enclosed statement. It is thus possible to run the pump for only two more hours and even this will be arranged for hereafter.

The only possible arrangement by which a much larger quantity of water can be given to Ganjam is by shifting the Ganjam pumps to the Pumping Station for Pigeon Cultivation at Ganjam and to remove and relay the rising main. Detailed reports on this arrangement are submitted for orders.

The petition is herewith resubmitted.

MM-571
D.O.NO. 240

OFFICE OF THE EXECUTIVE ENGINEER,
BUILDINGS DIVISION,

Dated, Bangalore the 10th February 38.

Dear Mr. Lakshmanachar,

RE: GANJAM WATER SUPPLY SCHEME

** ** *

With reference to your D.O.No.1281 dated 29-1-1938, asking me to interview the Chief Engineer in connection with the above scheme and to enclose a tracing from guide map showing the position of the water works of the two intakes of Ganjam and Seringapatam Towns, I write to inform you that I explained the whole situation to the Chief Engineer and enclose herewith a tracing from the guide map as desired in your above letter.

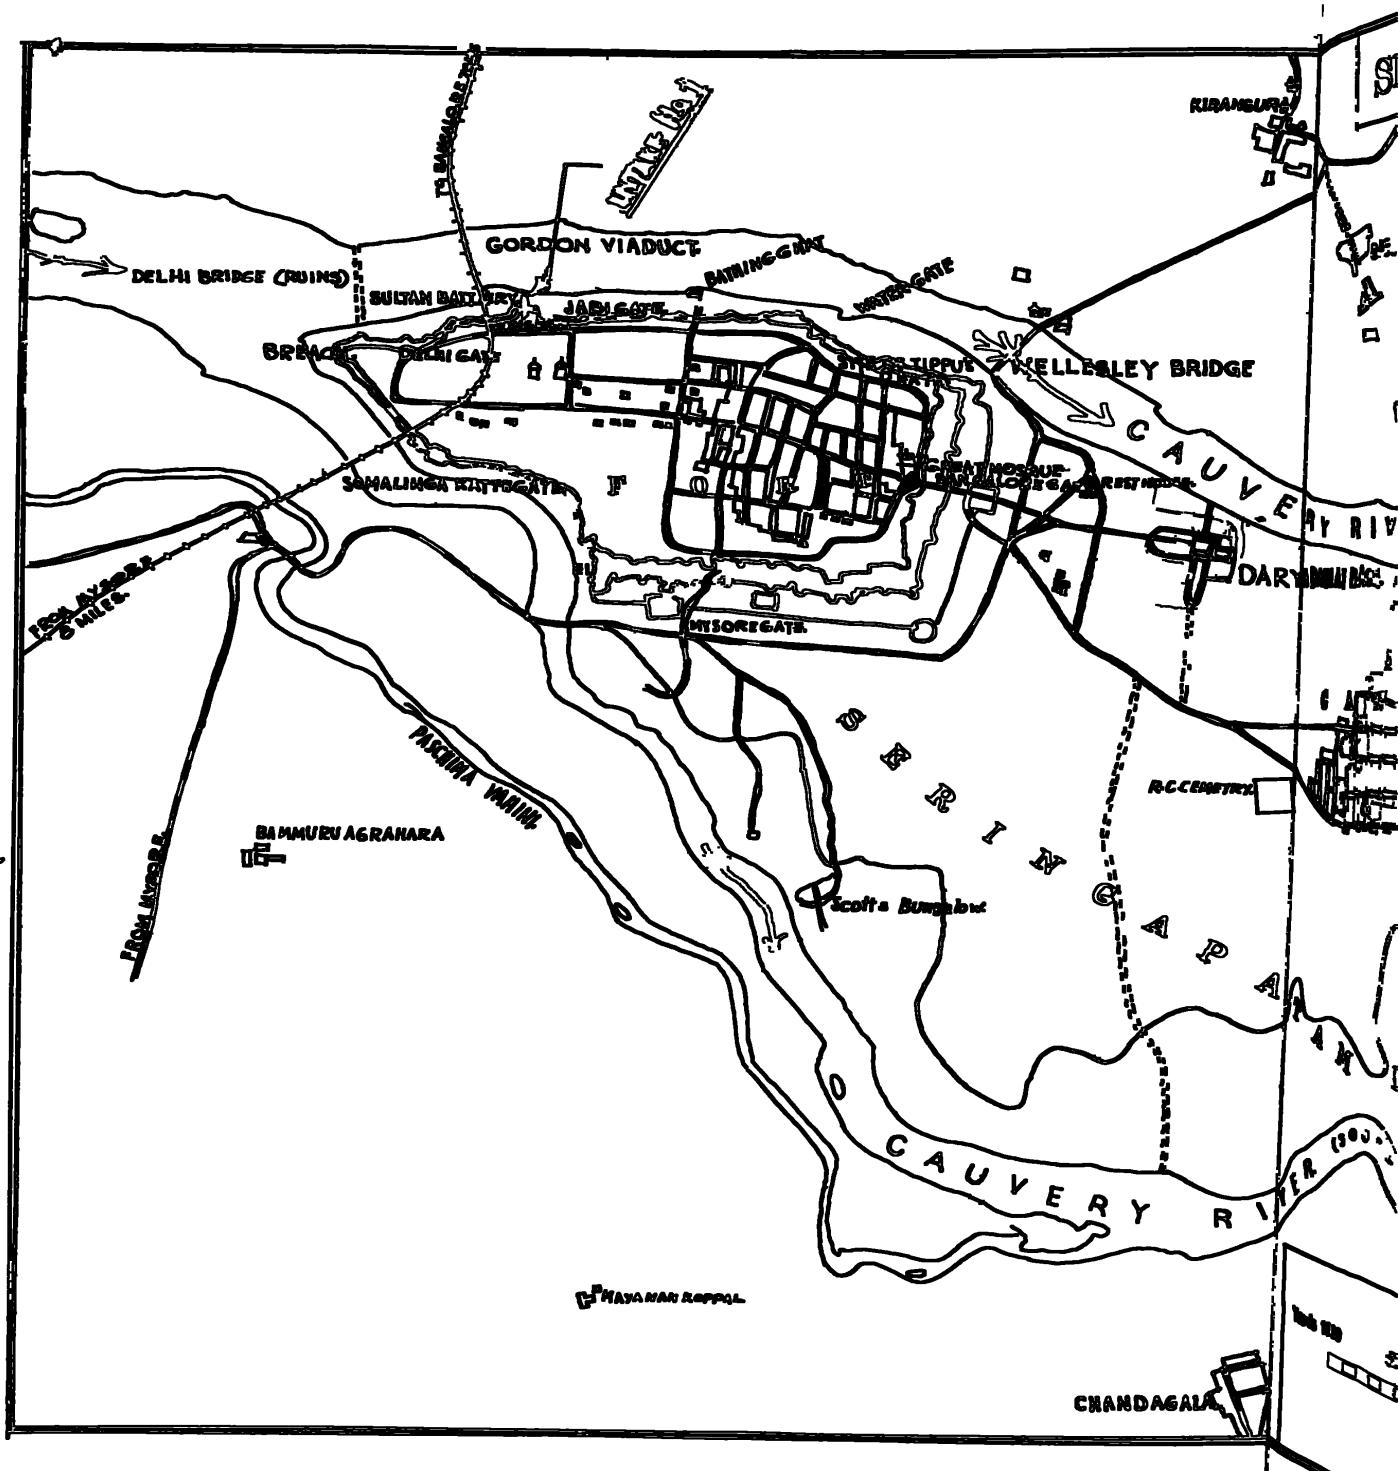

It can be seen from the map that the drainage of the whole town of Seringapatam gets into the river between these two intakes. By locating the water supply pump of Ganjam in the Seringapatam Pumping Station i.e., in the intake No. 1 there are some special advantages which are enumerated below -

- 1). There will be no necessity of employment of a separate trained mechanic to supervise the pumping, filtration and chlorination for Ganjam water supply as the one employed for Seringapatam water supply will look after this work also.
- 2). Though the pumps of Ganjam and Seringapatam water supplies are of different heads, the Ganjam pump can be used for Seringapatam water supply in case of emergency. So, the Ganjam pump may be considered as a standby to Seringapatam pump.
- 3). There will be the saving of cost of building protective works which will be required if the Ganjam water supply pump and filter have to be erected at the intake No. 2.
- 4). The existing mains can serve future extensions of Ganjam and Seringapatam which must be only towards the Bangalore - Mysore road.

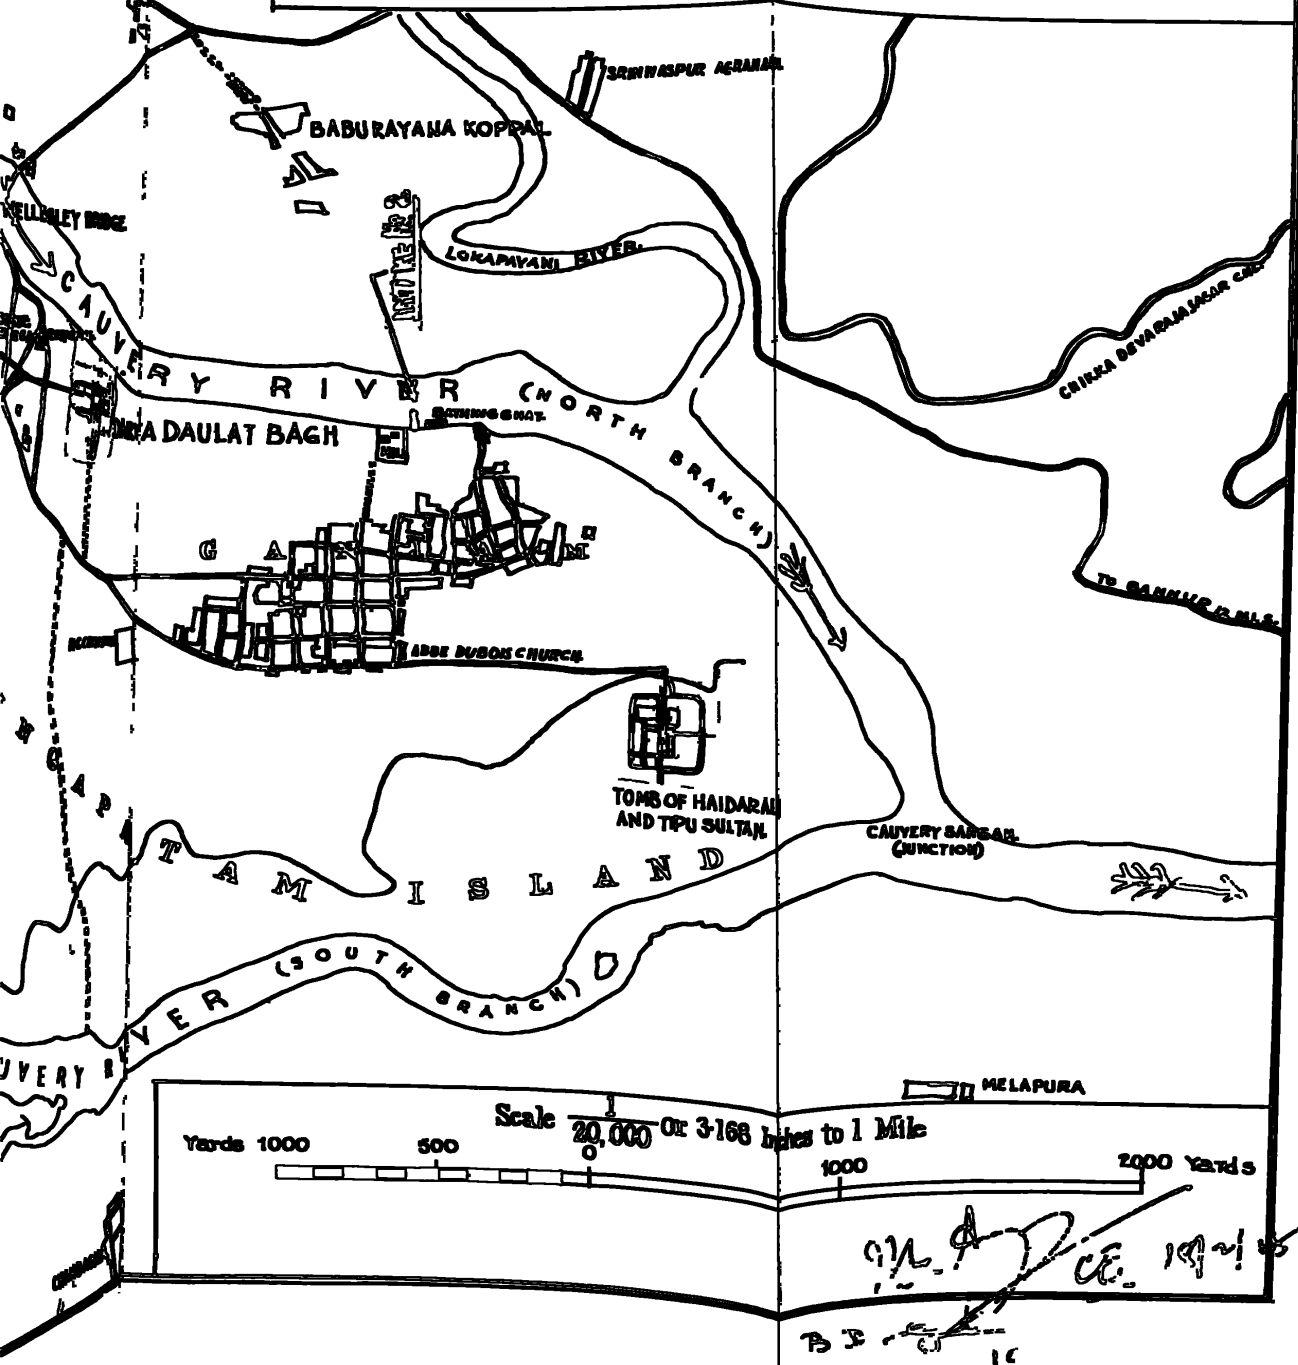

Yours sincerely,

N.Lakshmanachar, Esq., B.E.,
Assistant Secretary,
Public Works Department,
Bangalore.

Deputy Commissioner, Mysore District.

TO

P. H. KRISHNA RAO, ESQ., B.A.,
Secretary to the Government of Mysore,
Local Self-Government Dept., Bangalore.

Sir,

Subject:- Water supply to Ganjam including the
Gumbuz in the Seringapatam Town - -
Municipality.

(Remains)
With reference to your letter No. L.324 dated
11th July 1938, regarding the above, I have the honour
to forward herewith a copy of the resolution dated 18th
June 1938 received with report No. H.C.143/37 dated 27th
June 1938 from the President of Seringapatam Town Municipi-
pal Council.

2. Out of the excess cost of Rs.7,700/- over the
original estimate sanctioned by Government, a sum of Rs.3500/-
will have to be met out of the Gumbuz funds, and the balance
of Rs.4,200/- by the municipality and Government in equal -
proportions.

3. As there are not sufficient funds at the credit
of the Municipality, the Municipal Council have requested
the Government to sanction this amount viz: Rs.2,100/- as
a loan, to be consolidated with other loans obtained by -
the Municipality. As there is very little amount at the -
credit of the Gumbuz funds, no contribution can be made -
out of it. I think, this amount will have to be met out
of State funds.

I have the honour to be,

They have resolved that the
sum of Rs 3500/- provided in the
estimate for Gumbaz water supply
be met from the Gumbaz funds. The
share of the Municipality i.e. ^{the sum of} 200/-
will be paid out of the Municipal fund.
As there is no sufficient balance at
the credit of the Municipality I request
you to kindly move the Government
to graciously advance this amount
as a loan to be consolidated with
the other loans due from the Municipality.

The copy of the resolution is herewith
submitted for your perusal.

1. ம.க.ப. விகிதம் 7700/- ரூ. 27652 இடையில் The estimate for Rs 27652 includes a
 உதவித் தொகை 7700/- ரூ. 27652 இடையில் sum of Rs 3500/- Provided for Gumbaz -
 உதவித் தொகை 7700/- ரூ. 27652 இடையில் water supply As this amount of Rs 3500/-
 உதவித் தொகை 7700/- ரூ. 27652 இடையில் should be provided from the Gumbaz -
 உதவித் தொகை 7700/- ரூ. 27652 இடையில் funds, the estimate amount of the water
 உதவித் தொகை 7700/- ரூ. 27652 இடையில் supply to the Municipality above reduced
 உதவித் தொகை 7700/- ரூ. 27652 இடையில் to Rs 19982 of the
 உதவித் தொகை 7700/- ரூ. 27652 இடையில் original estimate is deducted, the balance
 உதவித் தொகை 7700/- ரூ. 27652 இடையில் will be Rs 4200/- Thus the share of the

Municipality will reduce itself to Rs 2100/- But the deduction given for the
for line of 5760 ft length is given at the original cost price As the cost of ^{the} Paper
has gone up the Government may be requested to kindly give deduction at
a lower rate leaving the last matter to the choice of the Benign Govt.
is resolved that the share of the Municipality subject to a maximum
Rs. 2100/- be met out of the Municipal Funds But as there is not sufficient
balance at the credit of the Municipality, the Govt may be requested to kindly
advance this amount as a loan to be consolidated with the other loans due
to the Municipality as per the correspondence which is now going on with the
Government
